AUTO WORKSHOP ERP

Administrator User Manual

This manual covers all features and functions available to the Administrator role in FormationX ERP.

FormationX ERP — Auto Workshop Management System

Version 3.0 | June 2026

Contents

1. [Getting Started](#)
2. [User Management](#)
3. [Managing Customers](#)
4. [Jobs — Workshop Workflow](#)
5. [Purchase Orders](#)
6. [Invoices & Payments](#)
7. [Settings & System Configuration](#)

1. Getting Started

As an Administrator, you have full access to all features in FormationX ERP. This includes managing users, configuring system settings, and accessing all operational functions.

Logging In

Step 1: Open the FormationX application in your web browser.

Step 2: Enter your email address and password.

Step 3: Click "Sign In" to access the dashboard.

Your Dashboard

The dashboard shows key metrics at a glance: Total Revenue, Outstanding Invoices, Active Jobs, Low Stock Alerts, and Gross Profit. Charts show revenue trends and sales by category.

2. User Management

Only Administrators can manage user accounts. Navigate to Settings > User Management.

Creating a New User

Step 1: Click "Invite User" on the User Management page.

Step 2: Enter the user's full name, email, and a password (minimum 6 characters).

Step 3: Select their role: Administrator, Manager, Staff, or View Only.

Step 4: Click "Create User". They can now log in immediately.

Role Permissions

- Administrator — Full access to all features and settings.
- Manager — All operations and reports, but cannot access Settings or manage users.
- Staff — Day-to-day operations: Customers, Jobs, Inventory, Invoices. No reports or settings.
- View Only — Can only view the Dashboard and Reports. Cannot create or edit anything.

Changing Roles & Passwords

Use the role dropdown next to each user to change their access level. Click the key icon to reset a password. Click the trash icon to delete a user (you cannot delete yourself or the last user).

Important: Changing a user's role takes effect immediately. They will see different menu items on their next page load.

3. Managing Customers

Navigate to Customers from the sidebar. This page shows all customer records with search and status filtering.

Adding a Customer

Step 1: Click "+ Add Customer" in the top right.

Step 2: Fill in the required fields: First Name, Last Name, and Email.

Step 3: Enter the billing address using the address search (type a suburb to auto-fill postcode and state).

Step 4: Click "Create Customer" to save.

Tip: Customers can also be created automatically when creating a new Job — just type a name that doesn't exist and fill in the details.

Editing & Deleting

Click the pencil icon to edit a customer. Click the trash icon to delete — the system will warn you if the customer has linked jobs or invoices.

4. Jobs — Workshop Workflow

Jobs are the core of FormationX. Each job represents work done on a customer's vehicle.

Creating a Job

Step 1: Navigate to Jobs and click "+ New Job".

Step 2: Search for an existing customer or create a new one by clicking "Create new customer".

Step 3: Enter the vehicle details: Make, Model, Year, and Rego.

Step 4: Describe what the customer needs in the Description field.

Step 5: Add parts from inventory — select a part and the price auto-fills.

Step 6: Add labour — choose from preset services (Full Service, Brake Replacement, etc.) or add custom lines.

Step 7: Click "Create Job" to save as a Draft.

Complete & Invoice (One Click)

When the job is finished, click "Complete & Invoice". This single action:

- Marks the job as Completed then Invoiced.
- Deducts all parts used from inventory automatically.
- Generates an invoice with parts + labour + GST.
- Sends the invoice to the customer via email/SMS (if configured).

Important: Once a job is invoiced, it cannot be edited. Make sure all parts and labour are correct before completing.

5. Purchase Orders

Purchase Orders are used to restock parts from your suppliers.

Creating a Purchase Order

Step 1: Navigate to Purchase Orders and click "+ New Purchase Order".

Step 2: Select a supplier from the dropdown.

Step 3: Add items from your inventory — cost prices auto-fill.

Step 4: Set the expected delivery date.

Step 5: Click "Create Purchase Order".

Receiving Stock

When a delivery arrives, edit the PO and change the status to "Received". This automatically adds the quantities to your inventory and updates stock levels.

6. Invoices & Payments

Invoices are generated automatically from completed jobs, or can be created manually.

Recording a Payment

Step 1: Click the credit card icon next to an unpaid invoice.

Step 2: Enter the payment amount, date, method (Card, Cash, Bank Transfer, Cheque), and reference number.

Step 3: Click "Record Payment". The invoice status updates to Paid when the balance reaches zero.

Sending Invoices

Click the paper plane icon to send/resend an invoice via email and SMS. Configure EmailJS and Textbelt in Settings > Email & SMS first.

7. Settings & System Configuration

Only Administrators can access Settings.

Key Settings

- Company Profile — Business name, ABN, email, phone, address.
- Invoice Settings — Invoice prefix, next number, payment terms.
- Tax Settings — GST rate (default 10%).
- Email & SMS — Configure EmailJS for email and Textbelt for SMS invoice sending.
- Google Maps — Add an API key for full street-level address autocomplete.
- User Management — Create, edit, and delete user accounts.
- Data Management — Export/import backups, reset data.

Data Backup

Go to Settings > Data Management to export a full JSON backup of all data. You can also save backups directly to the server or import from a previous backup file.
